PROJECTS

Cyber security (Ethical Hacking)
Cybersecurity Project: Ethical Hacking and Vulnerability Assessment

Description:
Conducted ethical hacking and vulnerability assessments to identify and mitigate security risks in web applications and network systems, ensuring robust protection against potential cyber threats.

Role and Responsibilities:
Performed penetration testing, vulnerability scanning, and threat modeling on critical systems. Identified security flaws, reported findings, and collaborated with developers to implement remediation strategies. Utilized tools like Metasploit, Wireshark, and Nessus for in-depth security analysis.

Achievements:
Uncovered and helped resolve critical vulnerabilities, reducing security risks by 70%. Enhanced the overall security posture and improved response times for security incidents by creating a detailed incident response plan.
